

# Restoring Indian Landscapes for Multiple Purposes

by Promode Kant, Institute of Green Economy & Janice Burns, IUFRO

- Large possibilities of restoration in open forests, coastal lands, urban and infrastructure lands, and lands under shifting cultivation, marginal agriculture and scrubs
- Dense and medium dense forests will be enriched by adaptation-centric forest management, reducing their vulnerability to climate change
- Restoration must be linked to employment generation to make it socially relevant and politically attractive

## Mangrove restoration

## Reforestation after shifting cultivation

## Reclamation of urban and semi-urban wastelands
