Landscape Governance Capacity Framework

framework for assessment and strategic guidance of governance at landscape level

International Conference on Forest Landscape Restoration under Global Change

June 7th 2017

Ilse Hennemann, Wageningen Centre for Development Innovation

Wageningen Centre for Development Innovation (CDI)

Research

Education

Value creation

Why do we work on landscapes?

- Complexity and interrelation of current global problems
- Prevention of working in sectoral silo's
- It connects products to place
- Engagement from business sector
- Sustainable development goals

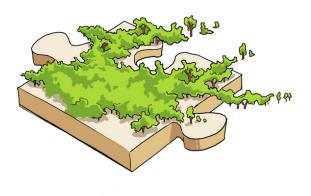

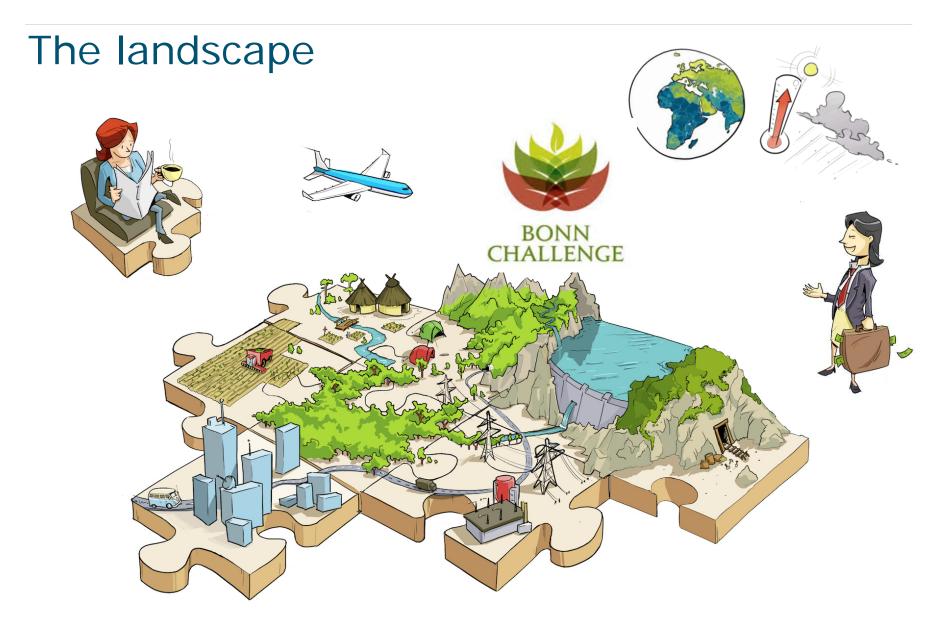

Landscape governance defined

- Multiple landscape services & functions
- Multiple stakeholders, conflicting interests
- Power imbalances
- Networks across politicaladministrative and sectoral boundaries
- Creation of new institutional arrangements
- All embedded in a unique "place"

Landscape governance requires new capacities

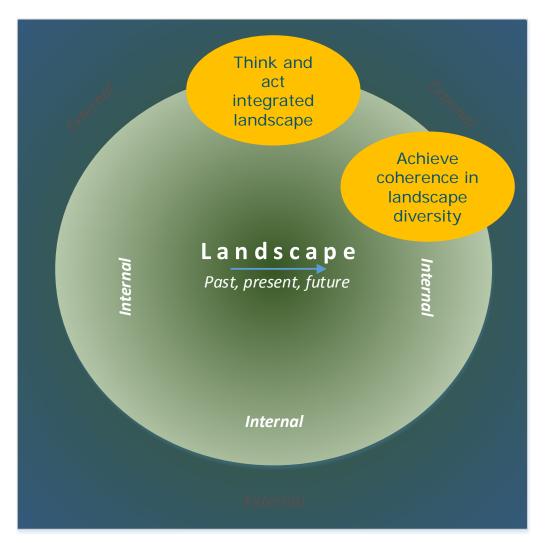

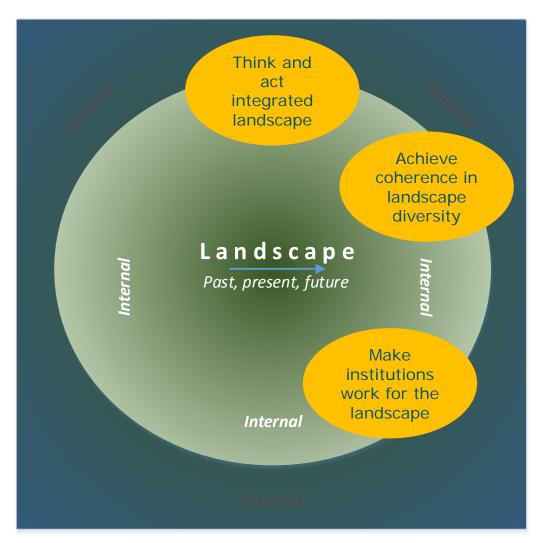

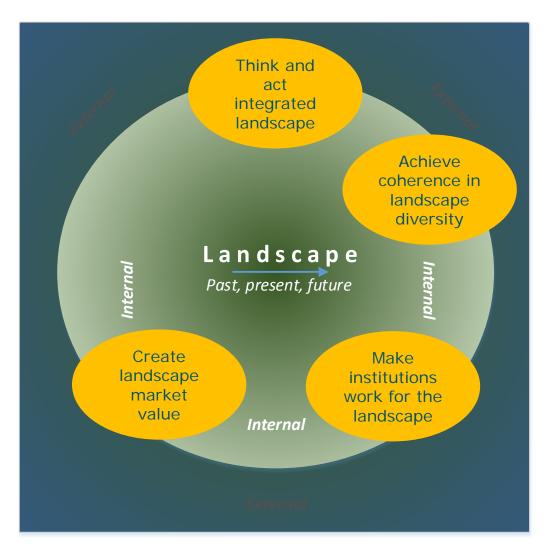

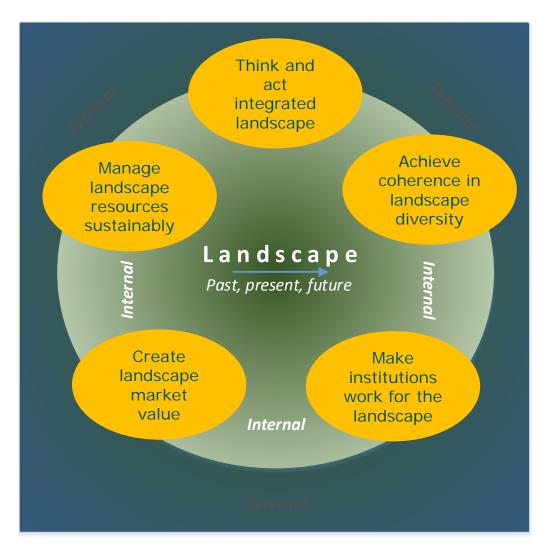

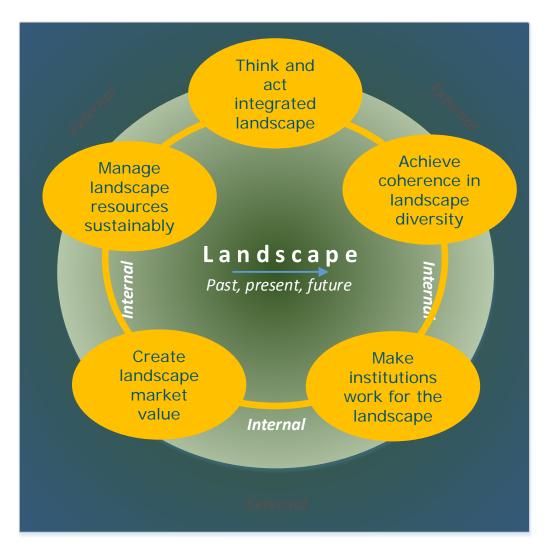

Example from Kenya - South Rift Landscape

- 1. Understanding the landscape (mapping tools)
- Defining Landscape Governance and translation to Maasai
- 3. Defining objectives and indicators
- 4. Assessing SORALO's capacities in order to strengthen Landscape Governance

Relevance for FLR

- Landscape Governance a prerequisite for FLR
- Gives an insight into strengths & weaknesses of the landscape
- Identifies capacities needed for FLR to take place
